

HAZARD FLAG AR FLAG

The AR Flag was designed in collaboration with the Salt Lake City International Airport in an effort to reduce the costs associated with flags creating FOD on the airfield. The dowel material is fiberglass – while many others use wooden dowels that are easily snapped, our material is both lightweight and extremely strong. Our newly developed active retention design securely holds the dowel in place while the flag material itself utilizes a heat-weld process to form a robust, highly tear-resistant product which reduces replacement costs long term.

The AR Flag is the superior choice when your project calls for highly visible warning markers. It was specifically designed to create a FOD-free environment by integrating with our low profile airport barricade without any additional fasteners or bolts.

FEATURES & BENEFITS

- Meets requirements of FAA Advisory Circular 150-2370-2G
- 100% FOD-Free system when used with the AR10x96 low profile barricade
- Fiberglass dowel
- Interchangeable flag
- Active retention secures flag

COLORS

Safety orange and white

SIZE

Height: 32 in / 81.3 cm

Flag Dimensions: 20 in x 20 in

WEIGHT

Dowel: 1 lb / 0.454 kg

Flag: 0.5 lb / 0.227 kg
